Quick Setup Button
- Press button. The display will change, and the display will change to the last menu selected.
- Press button again to exit setup mode.
- Press button to return to the last menu selected.

Mounting Bracket
- The mounting bracket is attached to the right side of the handlebar. Fig. 6. The mounting bracket is supplied as a separate item.
- To install the mounting bracket, use the screws provided with the bracket. Fig. 7. Secure the mounting bracket to the handlebar using the screws provided.

Wheels Size Input
- To set the wheel size on your computer, use the button on the top right of the console. Fig. 8. Hold down the button until the wheel size changes to your desired size.
- The wheel size input will stay in effect until the next time you change it.

Wheel Size Input
- Distance traveled is calculated in miles or kilometers.

Micro/ Kilometer Selection
- The distance traveled is calculated in miles or kilometers.

5th Screen - Average Speed (AVS)
- The display will show the average speed for the current riding session.
- The average speed is calculated by taking the total distance traveled and dividing it by the total time spent riding.

6th Screen - Trip Timer (TMI)
- The display will show the total time spent riding.
- The trip timer is reset at the start of each new session.

7th Screen - Temperature
- The display will show the current temperature.
- The temperature is calculated by taking the average of the previous 5 minutes.

8th Screen - Calories (CAL)
- The display will show the estimated number of calories burned.
- The calories burned are calculated by taking the average of the previous 5 minutes.

9th Screen - Fat Burning (CALF)
- The display will show the estimated number of calories burned for fat.
- The fat burning is calculated by taking the average of the previous 5 minutes.

Troubleshooting
- If the display is not responding, check the power source.
- If there is no power, check the battery.
- If there is still no response, contact Schwinn Customer Service.

Battery Information
- The battery cover cannot be removed.

Accessories
- The battery cover cannot be removed.

Sensor Wiring
- Make sure the sensor is within 10 ft of the computer, using cable ties to secure it in place. A little frill is allowed. Make sure to keep it splash proof and access to the front and rear axle of the bike. It should be possible to move the sensor in front of the belt. Once the sensor is in place, turn on the power and check that the sensor is working. If the sensor is not working, turn off the power, remove the sensor, and reinsert it. If the sensor is still not working, contact Schwinn Customer Service.

Auto Start / Stop
- In battery power, the cycle computer will automatically pick up the speed and distance data from the sensor. If the data is not in the correct format, the computer will ignore it.

Scan
- The display will show the current date and time.

Frost Frame Memory
- The display will show the current date and time.

Odometer Reset Function
- The display will show the current date and time.
